Experience

Web Development Intern

May 2026 – June 2026

Market Orbit

Delhi, India

- Built a modern responsive website using Next.js, React, TypeScript, and Tailwind CSS covering home, services, about, careers, partner, and contact pages.
- Developed interactive UI sections: animated service cards, accordions, marquees, scroll-reveal effects, testimonials, statistics blocks, and responsive contact forms.
- Contributed to backend structure using Express, Prisma, and PostgreSQL schema design for careers, leads, admin roles, FAQs, and site content management.

Projects

Dynamic Quiz Generator – Java, Spring Boot, Spring Security, PostgreSQL, JPA/Hibernate, JWT

Aug 2026

- Built a secure Spring Boot quiz platform with JWT-based authentication, BCrypt password hashing, role-based USER/ADMIN authorization, and RESTful APIs backed by PostgreSQL.
- Developed dynamic quiz generation by category/difficulty with randomized question selection, server-side score validation, ownership checks, and duplicate-submission protection, preventing answer-key exposure via dedicated DTOs.
- Engineered quiz history, attempt review, and normalized leaderboard ranking using completion rate, accuracy, and category/difficulty-based statistics.

Spndx – React, Node.js, Express, PostgreSQL, REST APIs, Gemini API

Apr 2026

- Built a production-grade finance dashboard with React/Vite frontend and Node.js/Express REST backend on PostgreSQL; deployed on Vercel + Render.
- Implemented role-based UI (Admin/Viewer), CRUD transaction management, and real-time Recharts visualisations with a Gemini-powered AI assistant for natural-language financial analysis.
- Added 11-language internationalisation support, dark/light mode theming, and responsive design across devices.

MolGenix – FastAPI, PostgreSQL, SQLAlchemy, Docker, AWS ECS, Gemini API

Mar 2026

- Built an end-to-end AI drug discovery platform at a 36-hour hackathon with FastAPI + PostgreSQL backend and SQLAlchemy ORM, containerised via Docker Compose.
- Implemented ADMET property prediction, molecular docking simulation, and ChromaDB vector search for compound similarity queries.
- Architected for cloud deployment on AWS ECS and Hugging Face Spaces with Gemini API integration for molecule generation guidance.
